

Anyone who uses opiate
pain medications,
methadone or heroin
can **overdose**.

Just in case-there's naloxone.

Naloxone/Narcan can reverse an opioid overdose
long enough to get medical care.

- Anyone in WA State can carry and give naloxone in an overdose.
- It's safe, easy to use, and can't be abused.
- Always call 911

Ask your provider or a pharmacist
about naloxone!!
